

Surveys and Statistics

Updated August 2014

The Department of Institutional Research is responsible for keeping official statistics and research about the University. Institutional Research compiles statistical reports for Mount faculty, staff and students, and completes surveys requested by external agencies. Institutional Research also advises faculty, staff and students on survey methods and can assist in compiling survey results.

To ensure uniformity of reporting official information about the Mount, information needed on surveys completed by departments other than Institutional Research that relate to Institutional Data e.g. enrollment numbers, faculty or staff size or budget/expenditures should be requested from Institutional Research.
